

# Getting started with RStudio and Installing packages

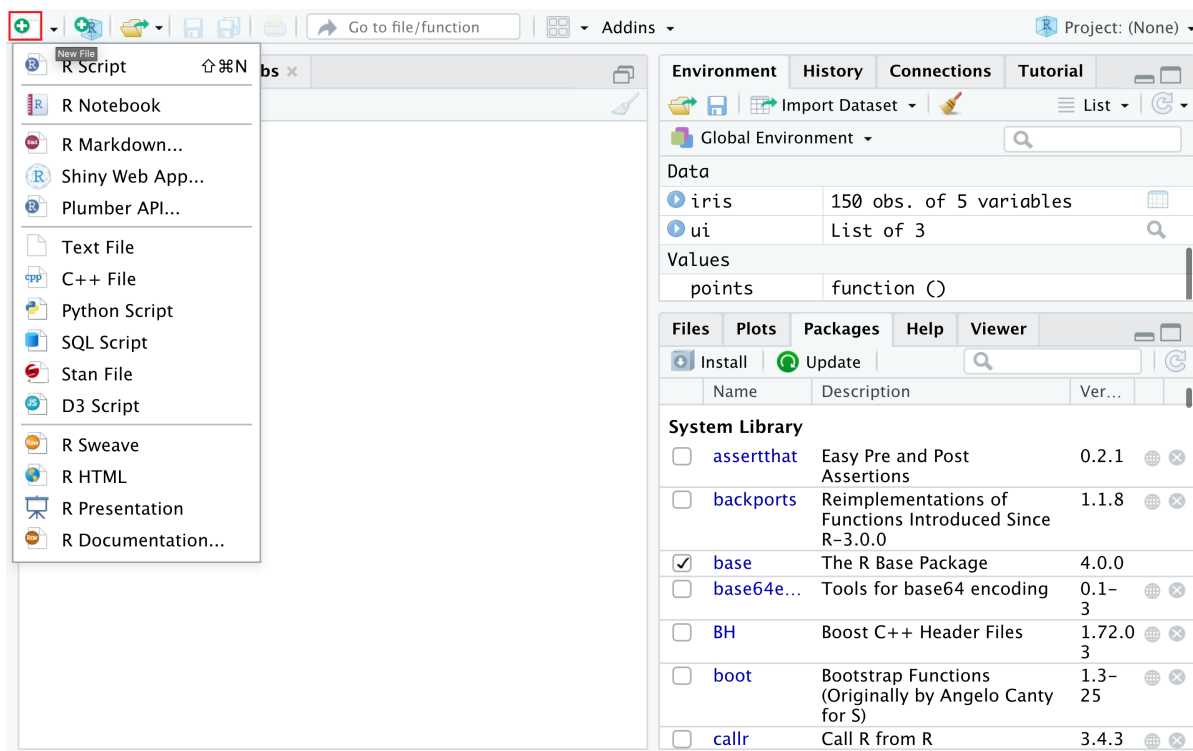

# Skills Network

## Objectives of Exercise:

After completing this lab, you will be able to:

- Load the datasets
- Install libraries

**Step 1** - Click the plus symbol on the top left and click R Script.

An untitled R Script panel opens. It would look like this.

The screenshot shows the RStudio interface. The top toolbar includes icons for file operations and a 'Go to file/function' search bar. The main editor window, titled 'Untitled1', is empty and has a red border. Below it is the Console pane with a prompt '>'. On the right, the Environment pane shows the 'Global Environment' with two objects: 'iris' (150 obs. of 5 variables) and 'ui' (List of 3). Below the Environment pane is the System Library pane, which lists installed and available packages.

Name	Description	Ver...
<input type="checkbox"/> assertthat	Easy Pre and Post Assertions	0.2.1
<input type="checkbox"/> backports	Reimplementations of Functions Introduced Since R-3.0.0	1.1.8
<input checked="" type="checkbox"/> base	The R Base Package	4.0.0
<input type="checkbox"/> base64e...	Tools for base64 encoding	0.1-3
<input type="checkbox"/> BH	Boost C++ Header Files	1.72.0-3
<input type="checkbox"/> boot	Bootstrap Functions (Originally by Angelo Canty for S)	1.3-25
<input type="checkbox"/> callr	Call R from R	3.4.3

**Step 2** - Now you load the iris dataset. Enter the following lines into the editor window that appears. Then select all the text, and click Run just above the editor window.

```
1. 1
2. 2
3. 3
```

```
1. library (datasets)
2. data(iris)
3. View(iris)
```

Copied!

The screenshot shows the RStudio interface after the R script has been entered. The editor window now contains three lines of code: 'library (datasets)', 'data(iris)', and 'View(iris)'. A tooltip 'Run the current line or selection (⌘⇧R)' is visible over the second line. The Console pane shows the prompt '>'. The Environment pane on the right still shows the 'Global Environment' with 'iris' and 'ui' objects.

**Step 3** - You are taken to the data view tab to inspect your dataset. The dataset contains five columns and the first four are floating point type while the last column is a label of data type string which contains the category value. You can see there are total 150 entries of which you can see the first 7.

The screenshot shows the RStudio environment with the 'iris' dataset loaded. The main window displays a table of the first 7 rows of the dataset. The columns are Sepal.Length, Sepal.Width, Petal.Length, Petal.Width, and Species. The console shows the commands used to load and view the dataset. The Environment pane on the right shows the 'iris' object with 150 observations of 5 variables.

	Sepal.Length	Sepal.Width	Petal.Length	Petal.Width	Species
1	5.1	3.5	1.4	0.2	
2	4.9	3.0	1.4	0.2	
3	4.7	3.2	1.3	0.2	
4	4.6	3.1	1.5	0.2	
5	5.0	3.6	1.4	0.2	
6	5.4	3.9	1.7	0.4	

Showing 1 to 7 of 150 entries, 5 total columns

```

> library(datasets)
> data(iris)
> View(iris)
>

```

**Environment** History Connections Tutorial

Global Environment

Data

- iris 150 obs. of 5 variables
- ui List of 3

Values

- points function ()

**Files** Plots Packages Help Viewer

System Library

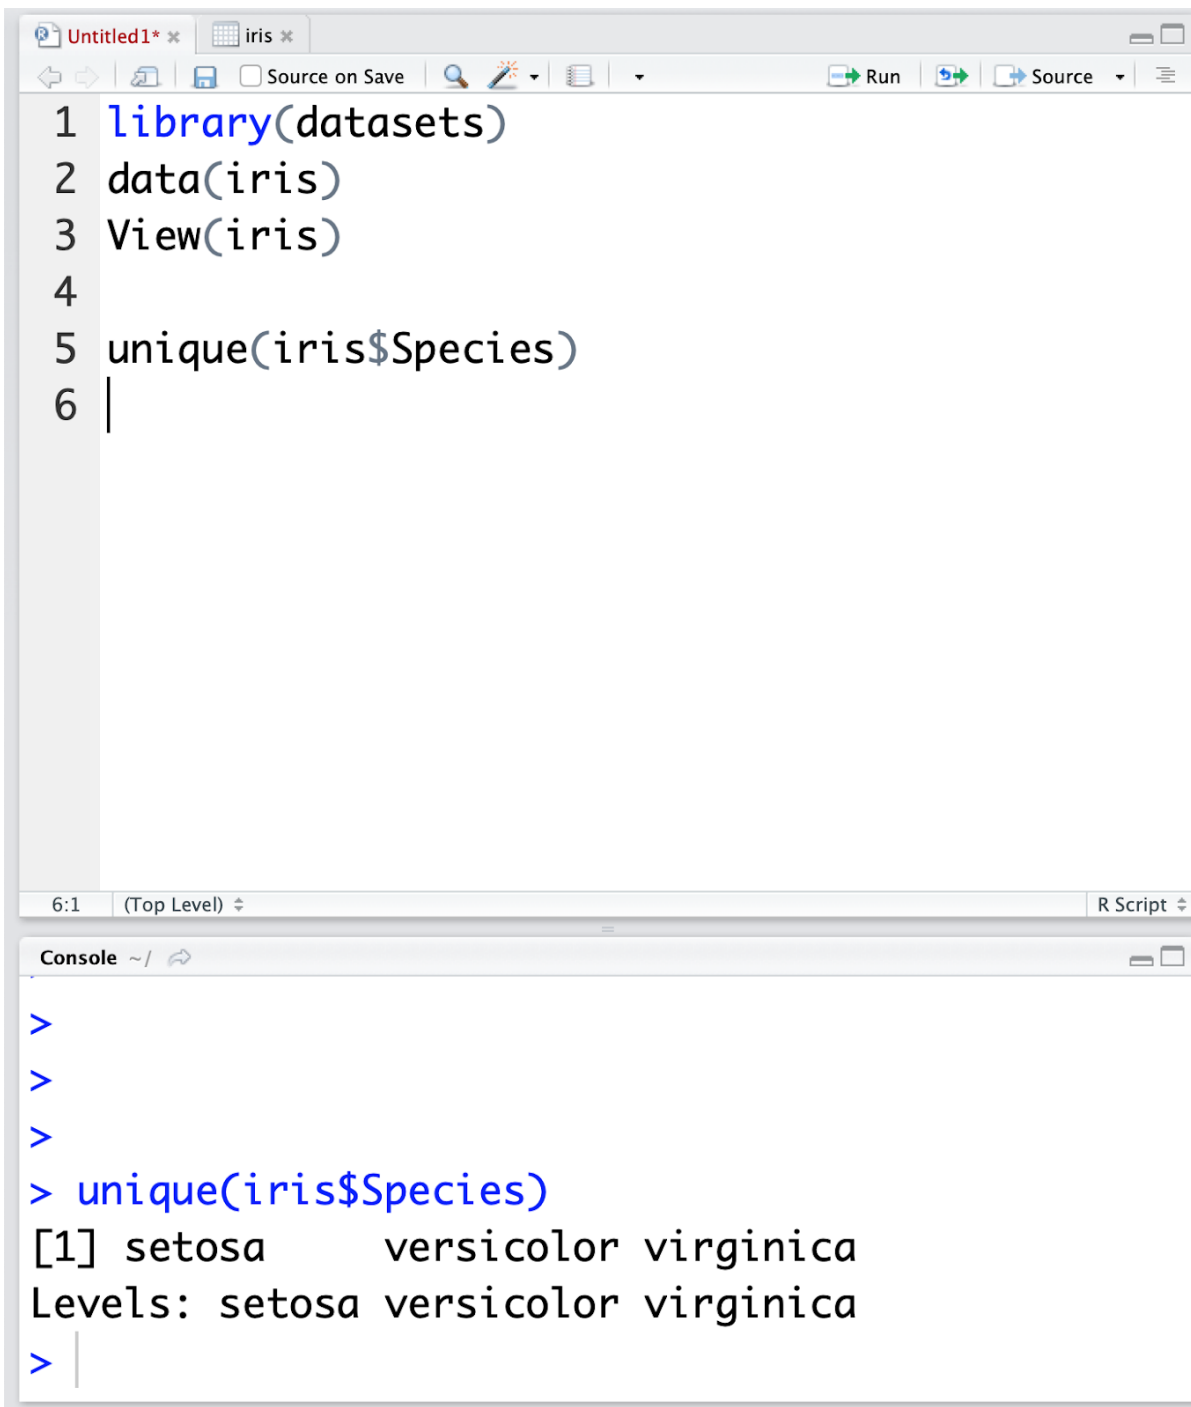

- ☐ assertthat Easy Pre and Post Assertions 0.2.1
- ☐ backports Reimplementations of Functions Introduced Since R-3.0.0 1.1.8
- ☒ base The R Base Package 4.0.0
- ☐ base64e... Tools for base64 encoding 0.1-3
- ☐ BH Boost C++ Header Files 1.72.0-3
- ☐ boot Bootstrap Functions (Originally by Angelo Canty for S) 1.3-25
- ☐ callr Call R from R 3.4.3

**Step 4** - Now you can find the different species present in the data set. Enter the following command in the editor window and click Run.

1. 1

1. `unique(iris$Species)`

Copied!

The screenshot shows an RStudio window with two panes. The top pane is the 'Source' editor, showing an R script with the following code:

```
1 library(datasets)
2 data(iris)
3 View(iris)
4
5 unique(iris$Species)
6 |
```

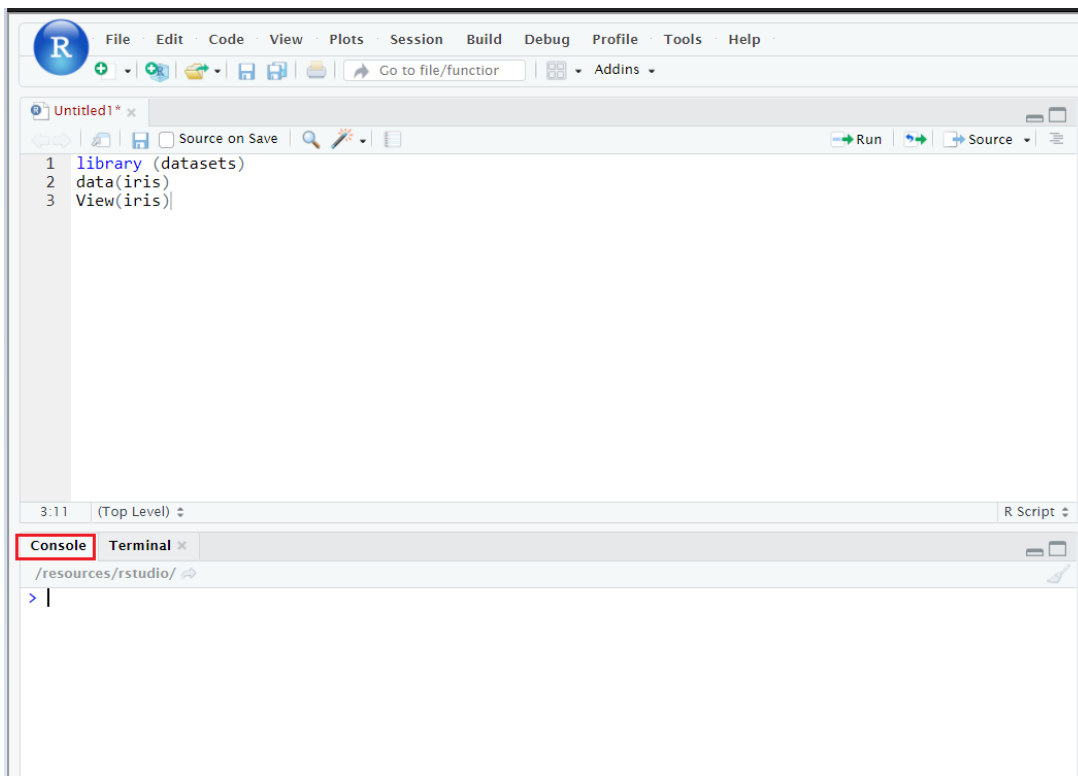

The bottom pane is the 'Console', showing the output of the executed command:

```
>
>
>
> unique(iris$Species)
[1] setosa      versicolor virginica
Levels: setosa versicolor virginica
> |
```

The console output indicates that there are three distinct species in the iris dataset: setosa, versicolor, and virginica.

In the Console window at the bottom you can see the result of the executed command and know that there are only three different species present in the data set.

**Step 5** - Next you will look into the data set in more detail. Open a Console.

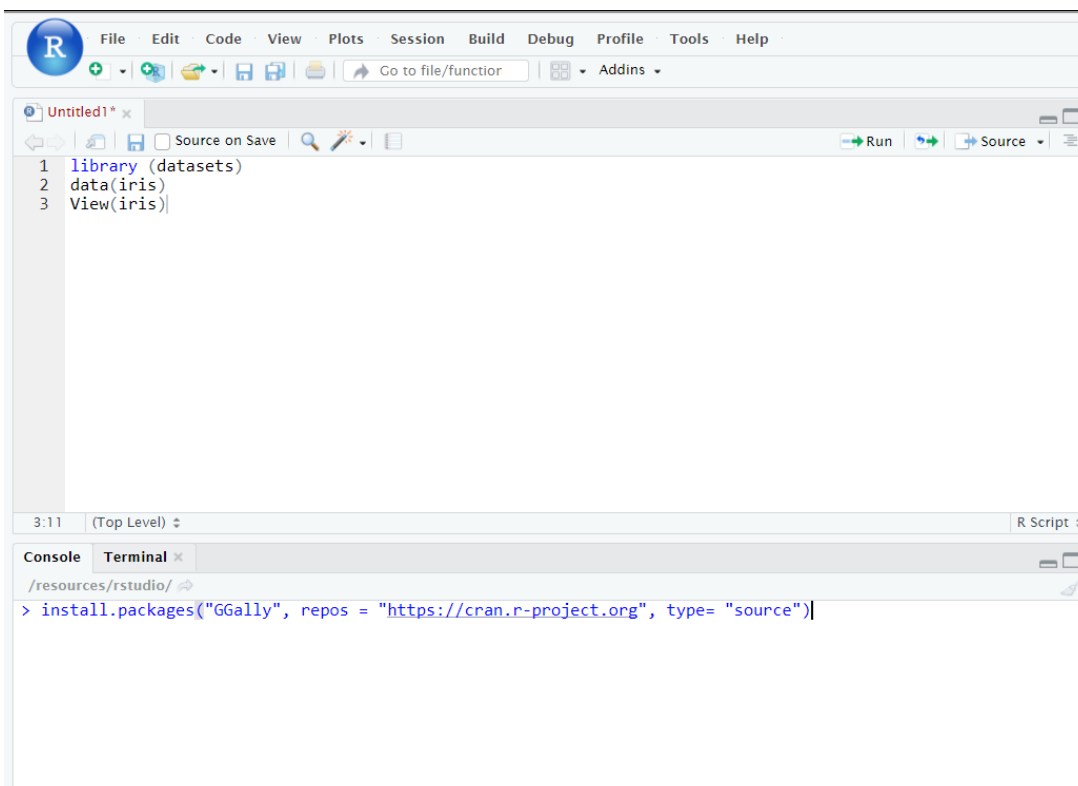

**Step 6** - Run the following command in the console.

1. 1

1. `install.packages("GGally", repos = "https://cran.r-project.org", type = "source")`

Copied!

**Step 7** - Click *Enter* to install the packages.

This concludes the lab; I hope you enjoyed it!
